## Education – let your environment safe

By: Muhammad Atif Khan, Business Research Analyst, Astaa Technologies

### *A new look at school security*

What if you could have a modern, state-of-the-art surveillance system which...

- Helped reduce willful damage to school property, thereby cutting the school's refurbishment costs and delivering a measurable return on investment?
- Could ensure the safety of staff and pupils during schools hours?
- Require no additional cabling?
- With an Axis network video solution all this is possible.

### **Cost-effective, digital technology**

Our digital surveillance systems have the advantage of being highly cost effective: installation costs are low since the need for dedicated cables is vastly reduced and the system can be run on existing computers. Our slim network-run equipment makes for low maintenance costs and images are stored on computer hard disks, which is a neat, cost effective storage solution. What's more, since Axis network products make use of modern digital technology, you are sure to get plenty of use out of the investments you make today. Which means that, no matter whether you are choosing a surveillance system for a junior school, a high school or an institute of higher education, you'll find an Axis solution that fits the bill.

### **Reliable systems for school safety**

Students and teachers hampered by the threat of harassment or violence will be comforted by the presence of reliable network cameras in the school's public spaces. This includes external areas such as walkways between buildings as well as internal ones such as restaurants and school corridors.

Outside school hours, the same surveillance system can be used to remotely monitor school property and deter vandalism. A sophisticated, built-in motion detection system can generate an alarm, which automatically transmits images to your security operators giving them accurate, up-to-the-minute information upon which to base their decisions.

Another interesting area of application for this technology is remote learning. An Astaa network video solution can be used to make attending lectures "at a distance" a viable option for students who are unable to attend lectures in person.

### **Tried and tested**

Over the last four years, Axis surveillance solutions have been installed in educational institutions all the way from Northern areas to Karachi. Our solutions to **Tahir Heart Institute (Rabwa), Aga Khan University Hospital (Karachi), Achison College (Lahore) & Arena Multimedia (Karachi)** with proven track record, you can feel confident that we will create the right solution and have the right products to achieve your school surveillance ambitions. Network cameras are increasingly being used in schools and

other educational establishments for security surveillance and the remote monitoring of playground areas, corridors, halls and classrooms.

### **Reasons to choose our network video**

- Remote access to video from any number of branch offices from a single location to protect staff and assets, verify transactions and cut down on false alarms
- Use existing network infrastructure and CCTV equipment for low start-up and operating costs
- Flexible and scalable solutions based on open standards — that meet your specific needs
- Proven future-proof technology — securing your investment
